

Anders Thulin, *Project Manager*

Anders Thulin is a Project Manager with The Avascent Group where he provides strategic support to companies pursuing an increased presence within highly regulated government markets, including for customers such as DOD, DOE and financial sponsors. In his four year tenure with Avascent, he has participated in over 60 engagements advising large integrators, major services firms, as well as specialized companies, providing mergers & acquisitions support, conducting due diligence, and providing capture support and competitive intelligence.

Recently, Anders managed an evaluation of federal government market trends, partnership options, and near-term opportunities in support of a leading industry and energy products provider. The engagement resulted in a multi-million dollar business development pipeline for the client, and an ongoing relationship between Avascent and client stakeholders. Targeting renewable energy engagements, he has supported several companies and organizations seeking to expand their renewable energy activities. One such organization is NASA, which Anders has supported on engagements such as assessing the organization's renewable energy technologies and expertise, and developing a fact-based marketing product to bolsters its "green aeronautics" work.

Born and raised in Stockholm, Sweden, Anders holds a bachelor's degree from the George Washington University's Elliott School of International Affairs, in Washington DC.
